---	-------------------------------------	--

Result area 1 - Enabling conditions Food and Nutrition Security

RESULTS

Jobs have been created both in the broader sector development programs as in the dedicated youth employment program. In the dairy and seed sector development projects, the jobs are resulting from increased employment at farm level, generated by more favorable circumstances created by the projects. In addition, job are created in the processing and service provision due to the increased volume of marketed produce. In the dairy sector, the observed reduction of jobs at farm level (less cows per farmers), was reversed by an increase of new jobs (intensified management). The creation of sustained jobs by the Youth Employment program, was particular successful when the skilling was focused on job opportunities in expanding agriculture sectors like dairy or when a conducive business environment was offered for self-employment.

INDICATORS	Baseline	Target	Result	Source
ST_Number of jobs supported in agricultural chains/sectors	NA	4999	7359	28028; 28052; 29417
ST_Number of women directly reached	NA	NA	16188	28052; 29342; 29417; 4000001029

Assessment of the results achieved across the entire result area 1

Assess achieved results compared to planning:	A. Results achieved better than planned
Reasons for result achieved.	The better achievements are mainly due the maturity of the projects.
Implications for planning.	No direct implication for planning. It is important to ensure that skilling of youth is focused upon well performing sectors or busines environments for reaons of sustained employment.

Result area 2 - Nutrition Food and Nutrition Security

RESULTS

The results on improved nutrition were basically achieved by the primary school milk program. The success of the program can be explained by the large interest of parents, the relatively low costs approach (parents pay for the milk), the well-designed support (utensils, clean water jar) that is provided to the schools and the organizational involvement of the District Education department. Yearly about 100.000 additional children benefit from the program. The program is being extended to other products (pro-biotic yoghurt) and targets groups (preschools). There is large national interest in the program.

INDICATORS	Baseline	Target	Result	Source
ST_Number of people with improved access to healthy/diverse food	NA	NA	105706	23617; 28028
ST_Number of people with improved food intake	100982	110000	105706	28028

Assessment of the results achieved across the entire result area 2

Assess achieved results compared to planning:	B. Results achieved as planned
Reasons for result achieved.	see above
Implications for planning.	Expansion foreseen on annual basis
Result area 3 - Productivity	
Food and Nutrition Security	

RESULTS

In general, increased income resulted from improved management through training, use of better inputs (improved seeds), better and more profitable connection with the market. For example, the use of improved seed varieties increased yields and resilience to adverse weather conditions. The introduction of QBMPs gave better milk prices for farmers and contracts between farmers and processors gave more income and income security. Also through support to the service providers in the various sectors, income was generated. Similar effects can be observed from job creation for youth.

INDICATORS	Baseline	Target	Result	Source
ST_Number of family farms (crop/livestock/fish producers) with increased productivity and/or income	NA	121200	109525	23617; 28028; 28052; 29342; 29417
ST_Total number of family farms (crop/livestock/fish producers) reached directly [2.1.1]	5000	20845	47542	28028; 28052; 29342; 29417; 4000001029
ST_Total number of family farms (crop/livestock/fish producers) reached indirectly 2.1.2	NA	8020	30755	23617; 28028; 29417

Assessment of the results achieved across the entire result area 3

Assess achieved results compared to planning:	B. Results achieved as planned
Reasons for result achieved.	Achievements were more or less according to plan. Number of people reached indirectly exceeded plans, partly because of increased number of mass awareness activities (for instance seed fairs and radio programs).
Implications for planning.	No implications
Result area 4 - Sustainability	
Food and Nutrition Security	

RESULTS

The Integrated Seed Sector Development project introduced the production of improved seed. These seeds are mostly more adapted to uncertain circumstances (draught resistant, early maturing, pest resistant). Use of these seeds increase the eco-friendly use of farm land.

INDICATORS	Baseline	Target	Result	Source
ST_Number of hectares of farmland (including pastures and fishing grounds) used more eco-friendly	NA	30000	16887	23617; 29417
ST_Total number of hectares of farmland (including pastures and fishing grounds) reached indirectly 3.1.2	NA	30000	16887	23617; 29417

Assessment of the results achieved across the entire result area 4

Assess achieved results compared to planning:	C. Results achieved poorer than planned
Reasons for result achieved.	The acreage of landrelies on the uptake of seed and whether the season is favorable. 2018 (second half) was disappointing, therefore achievements were less than planned targets.
Implications for planning.	No implications
